

August 17, 2025

Dear Hiring Manager,

As an active Warp user, I have seen first-hand how its agentic functionality streamlines development. I am very excited about the opportunity to contribute to Warp.

I have over 15 years of experience in tech, holding positions such as Lead Backend Developer, Sr. Systems Engineer, and Sr. Developer Educator. I am very comfortable working in complex environments and enjoy collaborating with others (internally and externally) to ensure features are built with all users' in mind. I feel that my multifaceted skill set would make me a great asset to the engineering team at Warp.

At Temeda, I redesigned the application's initialization process to reduce load times by ~89% for large clients. This involved batching network requests, customizing API endpoints, creating tailored SQL queries, and rebuilding various parts of the UI to support the new process.

Another notable project was the implementation of a GraphQL API written in Go that included custom type generation based on an existing SQL schema, an automated deployment process using Jenkins, Azure Container Instances, and shell scripting, and a dynamically generated UI for users to build queries with.

I look forward to hearing back from you and welcome the opportunity to discuss how my experience can help build Warp as a product and company.

Sincerely,

Brian Morrison II
